

Safari Snorkel Systems

Description:

From the Amazon to the Andies - from the Kalahari to the Kimberley - from the Sahara to the Simpson, four wheel drivers the world over have put their trust in a genuine Safari Snorkel System.

Pioneered in Australia in the early 1980's, Safari Snorkels were born out of a need to protect 4WD engines from the hazards of dust and water commonly encountered in touring and off road applications.

In arguably the best, if not toughest environment, Safari Snorkel Systems are thoroughly researched, tested and tooled for each unique model of popular 4WD in Australia. Genuine Safari Snorkels - the snorkel trusted by Australians.

Safari Snorkel Systems are manufactured to the highest standards in durable, UV stable, cross linked polyethylene material and deliver a continuous and cooler supply of air for maximum engine performance. Each system includes quality fixtures and fittings that deliver superior sealing, OEM levels of presentation and long-term durability.

In addition, Safari Snorkels are positively sealed in order to provide the engine with the ultimate in protection during river crossings and dusty desert driving conditions.

All Safari Charge Air Rams feature a highly effective water separator system built right into the air ram in order to remove rain water from the incoming air stream - thus ensuring safe engine operation through even the most torrential tropical storms.

An added benefit of the unique Safari Charge Air Ram is that it can be rotated to any position. This means great peace of mind for those who plan to travel in cold or high altitude conditions where heavy snow falls are anticipated. By rotating the air ram to face away from the prevailing wind/direction of motion, the air ram delivers additional protection from the choking effects of snow build-up inside the air intake.
