

Enforcer 4WD Suspension

Description:

The Enforcer Suspension product range is designed to improve the handling, comfort and safety of the vehicle. Heavy duty springs for extra load carrying are an option. Enforcer products include: Leaf SpringsCoil SpringsGas Shock AbsorbersShackle Pins & PlatesShackle BushesU BoltsCentre BoltsChassis Plates Enforcer have Australia's largest range of suspension components for 4WDs, Utes, Vans & Trucks

SOME SUSPENSION FACTS: Shock absorbers are designed to work with the spring system of a vehicle as one inseparable unit. It is actually the spring system which absorbs bump shock forces during suspension movement. The springs move not only upwards, during shock force, but downwards and it can take some time for a spring in motion to return to its neutral position. Shock absorbers are meant to slow and control spring oscillation travel and allow the wheels to maintain good road contact, which improves balance of steering, road stability and cornering reliability. Hence, suspension plays a vital role in the handling, comfort and safety of a vehicle.
